Day 1 - Nervous system, head and eye begin to form.

Day 2 - Heart and ear begin to form. Heart begins to beat.
Day 6 – Beak and egg tooth begin to form.

Day 9 – Embryo begins to resemble a bird. Mouth opening appears.
Days 11-12 – Tail feathers appear. Toes fully formed.

Day 17 – Beak turns towards air cell.
Day 20-21 – The embryo now occupies most of the egg shell, except for the air cell. The yolk sack is completely absorbed into the body. The chick pokes into the air cell and begins breathing, then uses egg tooth to poke around the shell to hatch.

Cut along the dotted lines and ask students to match the image with the corresponding state of development.
